REGENKELLE® by SAUNAGUT®

Due to the unique shower mouthpiece, the infusion water falls like rain onto the stones. This means that the amount of water can be dosed more evenly and distributed to the stones in a more targeted manner.

You need less fragrance and also protect your sauna heater, as less infusion water reaches the heating rods due to the better dosage.

Mouthpiece made of laser-welded stainless steel, handle made of oiled hardwood.

② + 6 glasses Item-No. 5451

Each shelf is fixed 3-fold with countersunk Spax screws.

SAUNAGUT® Ice Infusion Ball The special form of infusion

The ice infusion ball is a mould with which balls can be formed from snow or fine crushed ice. These balls can be enriched with a sauna fragrance or ideally with essential oils.

The sphere has grip grooves for a better hold. A built-in spike presses a funnel into the ice balls for dosing with fragrance. The result is ice balls with a diameter of approx. 10.5 cm.

The finished ice balls are placed on the hot stones and melt very slowly. One ice ball is recommended per 20 m³ or 10 kW heating capacity of the stove.
