MEASURING

It is difficult to give an exact running time for hourglasses because sand is a natural product. Tolerances of up to 2 min. are possible.

If several grains block, tap gently against the glass or turn the hourglass over briefly.

A light film may form on the inside of the glass cylinder. This is a natural phenomenon due to static charge.

The glass of all hourglasses is glued in place with a heat-resistant special adhesive. reduced risk of breakage!

Sauna Hourglass
Special, 15 min.

Made of solid beech wood.

Info

Why are there no more electric sauna clocks?

To withstand the special conditions in the sauna, a movement must meet certain requirements. Only one manufacturer was able to meet these requirements recently, but now cannot produce movements for sauna clocks themselves.

The only alternative left at the moment is the slave clock.

What is a slave movement?

A clock with slave movement is controlled by the minute pulse of a master clock located outside the sauna cabin. Thus, the actual movement is not exposed to the extreme conditions of the sauna.

Peweta Sauna Clock
with slave movement

Heat-resistant wall clock with slave movement explicitly suitable for use in sauna cabins up to approx. 95 °C.

With heat-resistant mineral glass. White lacquered, clearly readable metal clock face. Ayous wood case.

Protection class IP 40 (EN 60 529). Ø 22 cm. Minute pulse 24 V.

Item-No. **0511**
